

# Distracted driving is on the rise . . . and so are deaths.

- According to NHTSA, in 2013, **3,154** people were killed, and an estimated 424,000 were injured in motor vehicle crashes involving a distracted driver.
- Sending or receiving a text takes a driver's eyes from the road for an average of 4.6 seconds, the equivalent-at 55 mph-of driving the length of an entire football field, blind.

## WHAT IS DISTRACTED DRIVING?

- Distracted driving is any non-driving activity a person engages in that has the potential to distract them from the primary task of driving and increase the risk of crashing.
- Distractions include, talking or texting on a cell phone, grooming, eating or drinking, changing radio stations, or talking to passengers.

## TEENS ARE AT THE MOST RISK!

- Motor vehicle crashes are the leading cause of death for teens in the United States, more than homicide and suicide combined.
- The younger, inexperienced drivers under 20 years old have the highest proportion of distraction-related fatal crashes.
- As of December 2013, **153.3 BILLION** text messages were sent in the US (includes PR, the Territories, and Guam) every month.

Texting while driving is one of the most dangerous of all distracted driving activities, because it takes your hands off the wheel and eyes and mind off the road.

- Not surprisingly, drivers under the age of 20 text more than any other age group and the numbers are only increasing!

## HOW CAN TEENS HELP?

- Really listen and think about your parents' advice.
- Follow the **"HOUSE RULES"** even when you think you won't get caught.
- Remember, driving is a privilege that you will lose if you don't drive by the rules.
- Don't just sign a Parent-Teen Contract, but take it to heart and keep your promise.
- Remind your parents to set a good example for responsible driving behavior so you can learn from the best.
