Center For Cardiac Fitness
Cardiac Rehab Program
The Miriam Hospital
Objectives

- Discuss the three syndromes which comprise ACS
- Discuss the causes of ACS (Plaque formation)
- Review the medications used to treat ACS
- Recognize and explain the importance of medications used to treat ACS
What is Acute Coronary Syndrome?

• Three Presentations of ACS
  – Unstable Angina
  – Non-ST Elevation Myocardial Infarction (NSTEMI)
  – ST Elevation Myocardial Infarction (STEMI)
Plaque Formation

• Main cause of ACS
• Plaques occlude arteries
  – Greater occlusion = Increase in severity

• Partially or nearly occluded arteries
  – Unstable angina
  – NSTEMI

• Occluded arteries
  – STEMI
Plaque formation

1. Plaque develops in wall of artery
2. Plaque builds up
3. Plaque ruptures
4. Clot forms around rupture blocking blood flow
What is Unstable Angina?

• Angina
  – Chest pain
  – Heart’s demand for oxygen > Oxygen supply

• Characteristics
  – Incomplete blockage of coronary arteries
  – Cardiac enzymes remain normal
  – Not a medical emergency
  – No ECG changes
What is Unstable Angina?

• Stable vs. Unstable
  – Predictable vs. Unpredictable

• Treatment
  – Medications vs. Medications + Surgical Intervention
What are NSTEMI & STEMI?

- **NSTEMI**
  - Non-ST segment Elevation Myocardial Infarction
  - Incomplete blockage of coronary artery
    - Similar to unstable angina
  - Not always an emergency
  - Cardiac enzymes elevated
ECG complexes and intervals

ECG waves are labeled alphabetically starting with the P wave, followed by the QRS complex, and the ST-T complex (ST segment and T wave). The J point is the junction between the end of the QRS and the beginning of the ST segment. The PR interval is measured from the beginning of the P wave to the first part of the QRS complex. The QT interval consists of the QRS complex which represents only a brief part of the interval, and the ST segment and T wave which are of longer duration.
What are NSTEMI & STEMI?

• STEMI
  – ST segment Elevation Myocardial Infarction
  – Emergency situation
  – Clot completely blocks coronary artery
    • EKG changes (ST elevation)
  – Cardiac enzymes elevated
Heart attack

Plaques inside the coronary arteries sometimes break open or "rupture." This is what causes most heart attacks. When a plaque breaks open, it causes a blood clot to form inside the artery. As the clot grows, it can completely block off the flow of blood through the artery. That means that the tissue on the other end of the clogged artery does not get the blood and oxygen it needs, so it gets damaged or dies.
Risk Factors (ACS)

• Family history
  ◦ ACS
  ◦ Coronary Artery Disease (CAD)

• Hyperlipidemia
  ◦ Elevated LDL

• Hypertension
  ◦ Elevated blood pressure

• Smoking

• Diabetes
NSTEMI
• No ST segment elevation
• Cardiac enzymes present
• Partially-blocked artery
• May be an emergency

STEMI
• ST segment elevation
• Cardiac enzymes present
• Completely-blocked artery
• Always an emergency

Unstable Angina
• No ECG changes
• No cardiac enzymes present
• Partially-blocked artery
• Not an emergency
Acute Coronary Syndrome:

MEDICATIONS
Statins

• Examples:
  ◦ Simvastatin, pravastatin, atorvastatin, rosuvastatin, lovastatin

• Uses
  ◦ Decrease LDL + inflammation

• Directions
  ◦ Take once daily (sometimes at bedtime)

• Side effects
  ◦ Muscle cramping

• Monitoring
  ◦ Liver function tests
  ◦ Cholesterol panel
  ◦ CPK (at baseline)
Statins

• Drug interactions
  – Grapefruit juice
    • < 8 oz or < ½ grapefruit
  – Macrolides
  – Calcium channel blockers
    • Nicardipine, amlodipine, diltiazem
  – Gemfibrozil
Beta Blockers

• Examples:
  ◦ Atenolol, metoprolol, propranolol, bisoprolol, carvedilol, labetolol

• Uses
  ◦ Decrease blood pressure + heart rate

• Directions
  ◦ Take 1-2x/day

• Side effects
  ◦ Dizziness
  ◦ Low blood pressure/heart rate
Beta Blockers

• Monitor
  – Blood pressure
  – Heart rate

• Counseling points
  – Do not abruptly stop
ACE-Is & ARBs

• Examples:
  ◦ ACE-Is – Lisinopril, ramipril, captopril, enalapril, benazepril, quinapril, fosinopril
  ◦ ARBs – Losartan, candasartan, irbesartan, valsartan, olmesartan, telmisartan

• Uses
  ◦ Decrease blood pressure
  ◦ Protect kidneys
  ◦ Cardiac remodeling

• Directions
  ◦ Take 1-3x/day
ACE-Is & ARBs

- **Side effects**
  - Dizziness/drowsiness
  - Low blood pressure
  - ACE-Is
    - Dry cough (common)
    - Angioedema *(RARE)*
      - Call 911!

- **Monitor**
  - Blood pressure
  - Potassium

- **Drug interactions**
  - Potassium supplements
  - Potassium-sparing diuretics
Diuretics

• Examples:
  – Hydrochlorothiazide (HCTZ), chlorthalidone
  – Furosemide, torsemide, bumetonide
  – Spironolactone, eplenirone, triamterene, amiloride (potassium-sparing)

• Uses
  – Remove fluid
  – Decrease blood pressure

• Directions
  – Take once daily in the morning
Diuretics

• **Side effects**
  ◦ Dizziness/drowsiness
  ◦ Increase urination

• **Monitor**
  ◦ Blood pressure
  ◦ Electrolytes
    • Potassium, sodium, serum creatinine

• **Drug interactions**
  ◦ Potassium supplements
    • Potassium-sparing diuretics only
Nitrates

• Examples:
  ◦ Isosorbide **MONO**nitrate
  ◦ Isosorbide **DI**nitrate
  ◦ Nitroglycerin

• Uses
  ◦ Relieve chest pain
  ◦ Dilate arteries

• Directions
  ◦ Take 1-3x/day
  ◦ Sublingual – Take 1 tab every 5 mins x3
    ▪ Call 911 after 2\textsuperscript{nd} tab
Nitrates

• Side effects
  ◦ Dizziness/drowsiness
  ◦ Low blood pressure
  ◦ Headache (sublingual)

• Monitoring
  ◦ Blood pressure

• Drug interactions
  ◦ Numerous
  ◦ Phosphodiesterase-5 enzyme inhibitors
    • Erectile dysfunction drugs
    • CONTRAINDIATED!
Calcium Channel Blockers

• Examples:
  ◦ Amlodipine, nifedipine, felodipine, nicardipine
  ◦ Diltiazem (non-dihydropyridine)
  ◦ Verapamil (non-dihydropyridine)

• Uses
  ◦ Decrease blood pressure
  ◦ Dilate arteries
  ◦ Relieve chest pain

• Directions
  ◦ Take 1-4x/day
Calcium Channel Blockers

- Side effects
  - Dizziness/drowsiness
  - Low blood pressure
  - Fluid retention
    - EXCEPTIONS: Amlodipine, felodipine

- Monitoring
  - Blood pressure
  - Heart rate
  - Fluid retention

- Drug interactions
  - Simvastatin (amlodipine, diltiazem, verapamil)
Acute Coronary Syndrome: Medications

ANTI-COAGULANTS
Anti-Platelets

• Examples:
  ◦ Clopidogrel, prasugrel
  ◦ Ticlopidine
  ◦ Ticagrelor*
  ◦ Aspirin

• Uses
  ◦ Clot prevention

• Directions
  ◦ Take once or twice daily
  ◦ Ticlopidine
    • High-fat meals increase levels, antacids decrease levels
    • Take w/food to decrease stomach upset

*Max dose of aspirin w/ticagrelor = 100 mg/day
Anti-Platelets

• Monitoring
  ◦ Signs & symptoms of bleeding
  ◦ Absence of clots
  ◦ Serum creatinine, low heart rate (ticagrelor)

• Side effects
  ◦ Bleeding
  ◦ Gout, shortness of breath (ticagrelor)

• Drug interactions
  ◦ Numerous
  ◦ Clopidogrel > Other anti-platelets
Vitamin K Antagonists

• Example:
  ◦ Coumadin (warfarin)

• Uses
  ◦ Clot prevention & treatment

• Directions
  ◦ Take once daily in the afternoon/evening

• Side effects
  ◦ Bleeding

• Monitoring
  ◦ INR (in the morning)

• Drug & food interactions
  ◦ Numerous!
  ◦ Vitamin K
Direct Factor XA Inhibitors

- Example:
  - Rivaroxaban (Xarelto), apixaban (Eliquis)

- Uses
  - Clot prevention

- Directions
  - Take once daily
    - Dose $\geq 15$ mg – Take w/food

- Side effects
  - Bleeding

- Monitoring
  - Signs & symptoms of bleeding
  - Serum creatinine

- Drug interactions
  - Numerous!
  - Grapefruit
Direct Thrombin Inhibitors

• Example:
  ◦ Dabigatran (Pradaxa)

• Uses
  ◦ Clot prevention

• Directions
  ◦ Take twice daily
    • Do NOT open capsules!

• Side effects
  ◦ Bleeding
  ◦ Heartburn (dyspepsia)

• Monitoring
  ◦ Signs & symptoms of bleeding
  ◦ Serum creatinine

• Drug interactions
  ◦ Numerous

Summary

• ACS is comprised of three disorders
  ◦ Vary in degree of severity
• ACS can be a medical emergency
• Many medications are used to treat ACS
• Goals of treatment are to:
  ◦ Decrease blood pressure
  ◦ Prevent clots
• Many of these medications interact w/other medications
  ◦ Talk w/your doctor or pharmacist!
Thank you!
