RIH – CHEST FOR THORACIC AORTA ANEURYSM REPAIR
GE LIGHTSPEED 16 / OPTIMA CT580 PROTOCOL

Indications: Evaluate patentcy of stent graft, to determine thrombosis of excluded portion of aorta, and to look for endovascular leaks.

IV Contrast Volume / Type / Rate	100cc omni 350 / 4cc per second				
Scan Delay	arterial smart prep		delayed 120 seconds		
2D/3D Technique Used	DMPR of 5mm x 5mm **coronal chest** series of the arterial and delayed phases (auto-batch on), average mode, auto-transferred to PACS.				
Comments: The smart prep threshold for the arterial phase is +100 hu at the proximal thoracic aorta. This protocol is a non contrast, then arterial phase, then delayed phase of the chest to assess thoracic aorta aneurysm repair.
