The Need

Young adults with psychiatric illness face several challenges, including navigating multiple programs and delivery systems. Existing mental health services are not necessarily tailored to their mental disability or age range, which may discourage young adults from receiving the care they need.

Mission:

To help young adults with mental health issues live more productive lives by providing comprehensive and age appropriate psychiatric services.

Our program provides psychopharmacologic consultation, long term psychiatric care, referral and partnership with interpersonal, supportive, dialectical and cognitive behavioral therapists. We work with family members, colleges and universities to provide individually tailored treatment. Our clinicians coordinate with inpatient and partial hospital programs to provide each young adult with a continuum of care that is customized to their needs.

Our staff has expertise in treating young adults in a variety of areas:

- Mood Disorders
- Anxiety Disorders
- Attention Deficit Disorder
- Eating Disorders
- Substance Use Disorders
- Trauma Related Disorders
- Psychotic Disorders
- Impulse Control Disorders
- Adjustment to Chronic Medical Illness

Services offered include:

- Comprehensive evaluation
- Psychopharmacologic treatment
- Individual counseling
- Family counseling
- Patient access to a 24/7 on-call clinician
- Consultation with parents and loved ones
- Liaison with university faculty and staff
- Interpersonal and supportive group therapy

Campus Consultation Service

We offer telephone consultation to campus based counseling and student health centers in order to help providers and students receive timely and complete care.
